MELLIN'S FOOD. THE STANDARD INFANT FOOD.

EGYPT

EGYPT

Mellin's Food, for infants from birth, produces when mixed a diet corresponding to breast milk. It supplements the deficiencies and increases the digestibility of cow's milk. Babies love its delicious flavour and they thrive upon it because it builds up firm flesh, strong bones and active brain and nerves. It is the food for health and vitality. Easily prepared, no cooking required.

Mellin's Food Biscuits are specially recommended for infants at the weaning period, when changing from a purely liquid to a partially solid diet. Mellin's Food Biscuits are rich in body-building material and aid in teething. The delicious flavour commends them to all. Infants love them and thrive upon them.

Mellin's Lacto is produced from the finest wheat and malted barley and carefully selected rich cow's milk. Mellin's Lacto has only to be mixed with warm water to be ready for use, and is the ideal food for infants and invalids where fresh milk is unobtainable or its source of origin falls under suspicion.

THE ROYAL STANDARD.

Mellin's Food preparations are obtainable from Chemists and Dealers throughout the world. Full particulars will be gladly sent on request.
